SIRGAS was created in 1993 during the International Conference for the Definition of a South American Geocentric Reference System held in Asuncion, Paraguay. It was promoted and supported by IAG, PAIGH and the former DMA, today National Geospatial-Intelligence Agency (NGA).

26 years ago

SIRGAS acronym
1993: Geocentric Reference System for South America

The 2000 GPS campaign was extended to North- and Central America.

2001: Geocentric Reference System for the Americas

The United Nations Organization, at its 7th Cartographic Conference for The Americas (New York, January 22 – 27, 2001), recommend to adopt SIRGAS as official reference system in all the American countries.
Define a tridimensional geocentric reference system

**SIRGAS adopted the conventions provided by IAG**

Realice and maintain a geocentric reference frame.
(the network of stations with high-precise geocentric coordinates \([X, Y, Z]\) and their variation with time \([Vx, Vy, Vz]\)).

**WORKING GROUP I**

Densificate the continental reference frame in the SIRGAS member countries, as well as promote and supporte of its utilization in practical and scientific applications

**WORKING GROUP II**

Define and realize the unified vertical reference system based on the consistent combination of physical and geometric heights, include the determination of the reference frame variations with time.

**WORKING GROUP III**
 Torres del Paine National Park

Tour operator: Habitat

Guides:
- Guido Guzmán
- Hernán Reyes
- Jorge Barros

Special features:
- High mountain peaks
- Unique wildlife
- Trekking opportunities

Expectations:
- Scenic views
- Adventure activities

Since Nov 2019

USC (Chile)

Since Nov 2019

Works with SIRGAS guides
Oriented to ensure the availability of a highly accurate reference frame consistent with the ITRF.

Materialized by more than 400 GNSS continuous stations.

It densifies the ITRF in Latin America and the Caribbean being rigorously processed at weekly intervals.
SIRGAS WG I Reference System (3)

SIRGAS WG I structure

1 European institution
12 Latin American institutions

DGFI-TUM
(Deutsches Geodätisches Forschungsinstitut – TUM)
→ desde junio-1996 en condición de IGS RNAAC SIR

IBGE
(Instituto Brasileiro de Geografia e Estatística)
→ desde agosto-2008

IGAC
(Instituto Geográfico Agustín Codazzi)
→ desde enero-2010

LUZ
(Universidad del Zulia)
→ desde enero-2010

SGM
(Servicio Geográfico Militar)
→ desde enero-2010

IGM
(Instituto Geográfico Militar)
→ desde enero-2010

IGN
(Instituto Geográfico Nacional)
→ desde enero-2011

INEGI
(Instituto Nacional de Estadística y Geografía)
→ desde enero-2011

UNA
(Universidad Nacional)
From 1-2013 to 1-2019

USCH
Universidad de Santiago de Chile
from 5-2019

UNLP-Ar
Ionospheric Analysis Centre
from 2003 to 2015

CIMA-Ar
Neutral Atmosphere Analysis Centre
Facultad de Ingeniería, UNCuyo, Umaza, from 2013
In May 2019, Universidad de Santiago de Chile began as SIRGAS Processing Centre.

Congratulations USCH!!

In June 2019, DGFI TUM assumed the stations in charge of LUZ.

Thanks DGFI!!

From 1-2010 to 6-2019

From 1-2013 to 1-2019

From 1-2010 to 6-2019

(Deutsches Geodätisches Forschungsinstitut – TUM)

Desde junio-1996 en condición de IGS RNAAC SIR
INTERNAL Accuracy, 54 weeks (sep 2018-sep 2019)

Weekly combination (54 weeks)
- RMS [mm] and Chi^2/DoF
  - IBGE solutions
  - DGFI solutions

Residuals weekly solution w.r.t. previous solution
- N[mm], E[mm], U[mm]
  - IBGE solutions
  - DGFI solutions

RMS_IBGE solution w.r.t IBGE previous solution
- N[mm], E[mm], U[mm]

RMS_DGFI solution w.r.t DGFI previous solution
- N[mm], E[mm], U[mm]
INTERNAL control with the previous weekly solution

EXTERNAL Accuracy, 54 weeks (sep 2018-sep2019)

External control with respect to IGS solution
(between 68 and 78 IGS stations)
SIRGAS geo-portal

It is maintained by Laura Sánchez, IGS RNAAC SIRGAS, DGFI-TUM, Munich, Germany

The translation into the Portuguese language is provided by Wagner Carrupt Machado e Gabriel do Nascimento Guimarães, Universidade Federal de Uberlândia - Campus Monte Carmelo

Thanks!!, Muito obrigado !!!!
Productos de la red SIRGAS-CON

En el procesamiento rutinario de la red SIRGAS-CON se generan los siguientes productos:

**Soluciones semanales semilibres** (loosely constrained) en formato SINEX para cálculos posteriores, por ejemplo, combinación con el poliedro global del IGS, determinación de soluciones multianuales, etc.

**Coordenadas semanales de las estaciones SIRGAS-CON** ajustadas al mismo marco de referencia utilizado por el IGS (International GNSS Service) en el cálculo de las órbitas de los satélites GNSS. De este modo, usuarios de estas técnicas en América Latina disponen de coordenadas de referencia para el ajuste de sus levantamientos.

Which countries have adopted SIRGAS in the national densifications?

21 member countries

More than 26 years of evolution

More than 50 institutions from 20 countries.

15 National networks densify SIRGAS

To integrate the local geodetic datum in SIRGAS is based on:

- Establishment of a first-order national GNSS network.
- Determination of transformation parameters.
- Adoption of SIRGAS as the official reference framework.

SIRGAS-CON also provides the geodetic infrastructure in the region for atmospheric studies:

1) Zenith Total delay (ZTD) in each SIRGAS-CON station (2014-2019)

The SIRGAS tropospheric products are computed by the SIRGAS Analysis Centre for the Neutral Atmosphere (CIMA), which is operated by the Facultad de Ingeniería of the Universidad Nacional de Cuyo (UNCuyo, Mendoza, Argentina) in cooperation with the Facultad de Ingeniería of the Universidad Juan Agustín Maza (Mendoza, Argentina) and with support of the Argentinian Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET).

The SIRGAS tropospheric products are weekly generated with a latency of 30 days. They are available with an hourly sampling rate in daily SINEX TRO files since January 2014 and they can be downloaded from:

More details about the processing strategy can be found at:

Whenever you use the SIRGAS tropospheric products, please include this publication as a citation.

Neutral Atmosphere Analysis Centre
Facultad de Ingeniería, UNCuyo, Umaza, from 2013
IWV$_{\text{SIRGAS}}$ values (31-12-2017 to 6-1-2018), 6 hourly rate

ZTD$_{\text{SIRGAS}}$ values were validated w.r.t:
- ZTD$_{\text{IGS}}$
- ZTD$_{\text{radiosounding}}$

- IWV$_{\text{SIRGAS}}$ values were validated w.r.t IWV$_{\text{radiosounding}}$
Since 1997, SIRGAS Working Group III:

- Has been compiled information on heights (physical and geometric) and gravity from the member countries.
- Have identified and work on problems as missing connection, errors, etc.
- Have coordinated campaigns in neighboring areas.
- Provides technical accompaniment: Countries such as Argentina, Brazil, Costa Rica, Uruguay and Ecuador, have remarkable advances; Chile, Colombia, El Salvador have begun with their organization and calculation tasks.
Vertical Reference System SIRGAS (SVRS) Protocols are:

- It is performed by appropriate physical heights (involving gravity by geopotential numbers);
- Connected to the geometric component of SIRGAS;
- Integrates the vertical networks of member countries;
- Referred to a global reference level $W_0$ of the IHRS / IAG;
- Associated with a specific reference period; i.e., you should consider the temporal variations of the coordinates and the network.
- Linked with a profile of GGRF stations consistent with the ITRF.

SIRGAS proposed a set of 22 IHRF stations in South America, Central America and Caribbean regions.

SIRGAS WG III is involved in the testing of approaches for facing the realization of such stations.

The progress of these objectives, in the countries, will be presented in the contributions of Thursday 14/11.
SIRGAS Workshops:
- 14 workshops: Total 436 students.
- 10 countries on average

SIRGAS Schools:
- 6 schools: Total 603 students.
- 17 countries on average

Symposia SIRGAS
More than 1850 attendees from 15 countries on average

We include SIRGAS2019 events, Rio de Janeiro, Brasil
The International Workshop for the Implementation of the Global Geodetic Reference Frame in Latin America, IGN, Buenos Aires, Argentina, from Sep 16 to 20, 2019
130 participants from 20 countries

Thanks Laura Sanchez, Claudio Brunini, Hermann Drewes !!

Thanks IUGG, IAG, IASPEI, IGNA, AGGO, ICG and IPGH

Workshop SLR in SIRGAS2019, IBGE, Rio de Janeiro, Brasil, 6 to 8 November, 2019
25 attendees from 9 countries 6 from latinamerican SLR observatories

Thanks Daniela Thaller!!
Thanks BKG, IBGE, UERJ, IAG and IPGH
Thank you, very much. Please continue working, SIRGAS needs you.

To the data centres, to the processing centres, to the combination centres, to the teachers inside the SIRGAS community.

Thank you, very much.

16 attendees received financial aid

5 student grant

IBGE, Rio de Janeiro, Brasil, 6 to 8 November, 2019
