International Laser Ranging Service

ILRS

ILRS: Current Status and Future Trends

Michael Pearlman
Carey Noll
ILRS Central Bureau

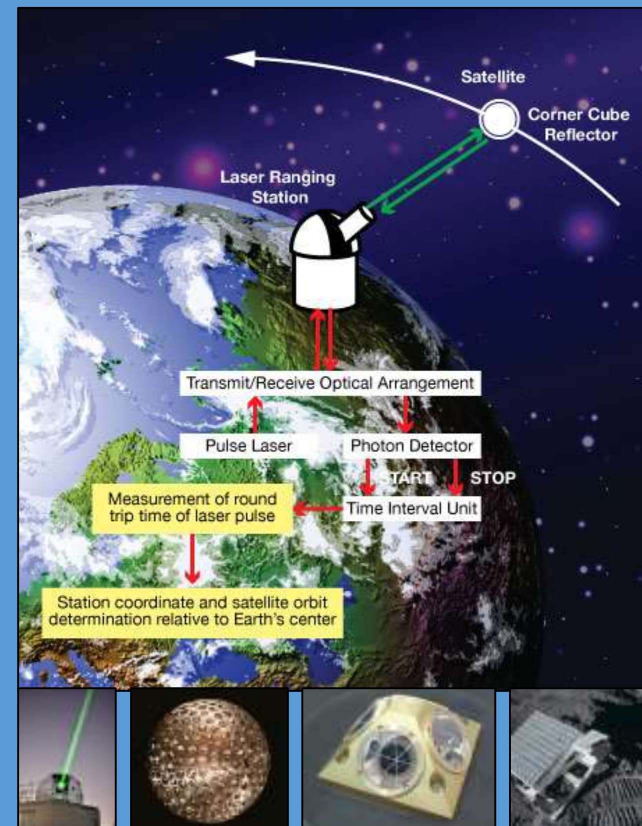
SIRGAS Meeting
November 12 – 14, 2019
Rio de Janeiro, Brazil

Outline

- Introduction
- SLR overview
- Current trends
- Network
- Mission support
- Infrastructure
- Conclusion

Satellite and Lunar Laser Ranging

- Space Segment:
  - Satellites equipped with reflectors corner cubes
  - 100+ satellites plus the lunar reflectors
- Ground Segment:
  - Short-pulse laser transmitter (10 -100 ps) and fast receiver
  - ~40 sites tracking
- Observable:
  - Two-way range measurement to target
- Characteristics:
  - Passive space segment
  - “Simple” range measurement
  - Only optical system in the space geodetic complex



SLR: satellite laser ranging

- Philosophically: a very simple measurement:

$$R = \Delta t \times c/2 - R_{atm} + R_{c/m} + R_{cal}$$

- In reality: a little more complicated: geophysical models and the engineering models (bias issues);
- State of the art is millimeter precision average measurements (consolidation into a normal points)
- Can track satellites from 300 km to 22,000+ km in day & night; some track the arrays on the Moon
- Each station tracks independently, but a network of stations can be scheduled together (set priorities) to optimize tracking
- Long lived target (Some targets already tracked for more than 50 years)

Unambiguous centimeter accuracy orbits
Long-term stable time series

SLR science and applications

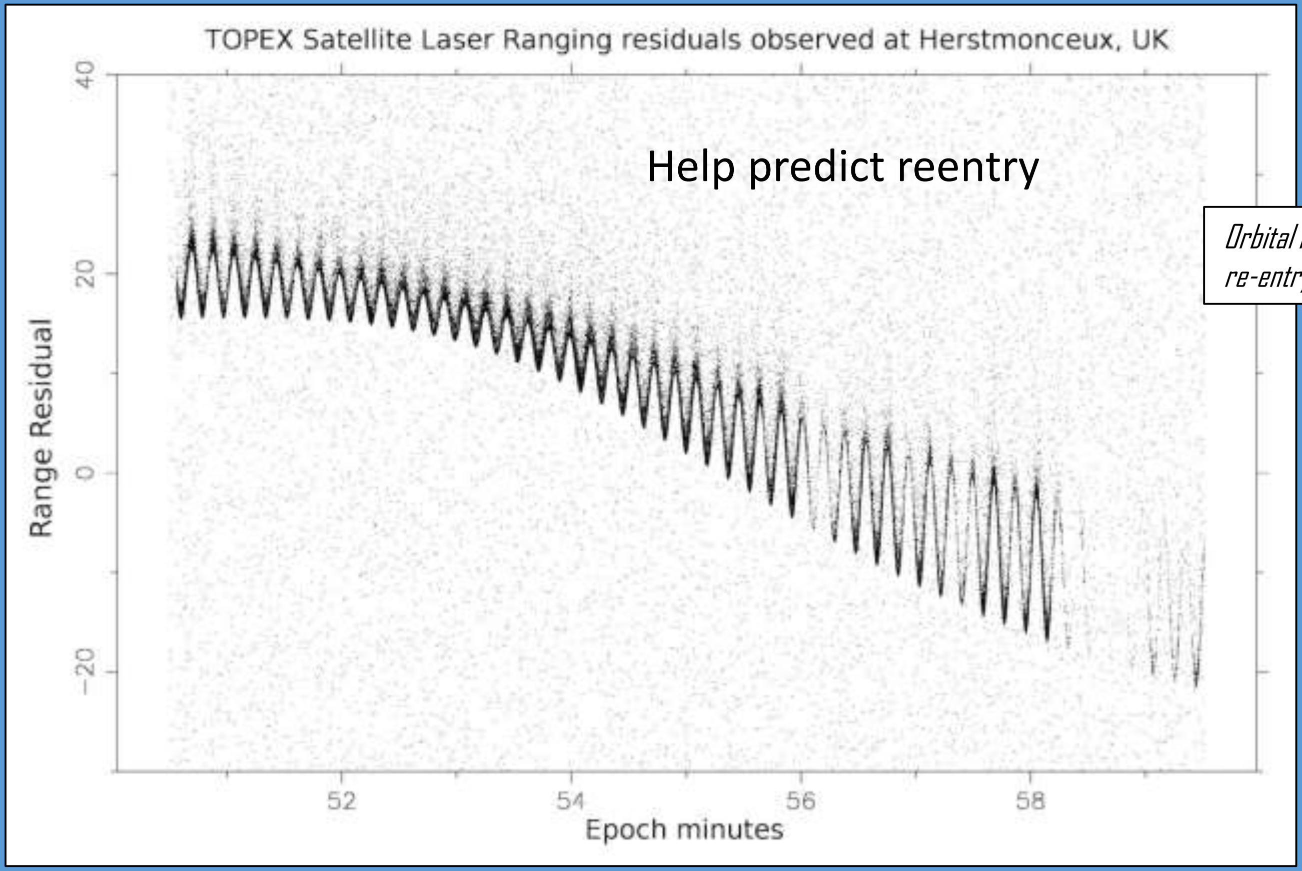
ILRS

- Measurements
  - Precision orbit determination (POD)
  - Time series of station positions and velocity
- Products
  - Terrestrial reference frame (center of mass and scale)
  - Improve understanding of the dynamics and modeling of GNSS orbits (one of our major users)
  - Calibration and validation of ocean and ice altimetry missions
  - Static and time-varying gravity field (low order/degree terms)
  - Plate tectonics and crustal deformation
  - Earth orientation and rotation (polar motion, length of day)
  - Total Earth mass distribution
  - Space science – satellite dynamics, etc.
  - Relativity and lunar science

SLR satellite constellation: examples

Geodetic							
Satellite	LAGEOS-1	LAGEOS-2	LARES	Etalon-1/-2	Ajisai	Starlette	Stella
Inclination	109.8°	52.6°	69.5°	64.9°	50°	50°	98.6°
Perigee (km)	5,860	5,620	1,460	19,120	1,490	810	800
LEO							
Satellite	Jason-3	ICESat-2	GRACE-FO	Sentinel-3A/-3B	SWARM	SARAL	TerraSAR-X
Inclination	66°	92°	89°	98.65°	92°	98.55°	97.44°
Perigee (km)	1,336	496	500	814.5	720	814	514
HEO/ GNSS							
Constellation	GLONASS	Galileo	BeiDou	QZSS	IRNSS	GPS-III (future)	
Inclination	65°	56°	55.5°	45°	29°	55°	
Perigee (km)	19,140	23,220	42,161	32,00	42,164	~12,550	

Tracking Space Debris: TOPEX/Poseidon

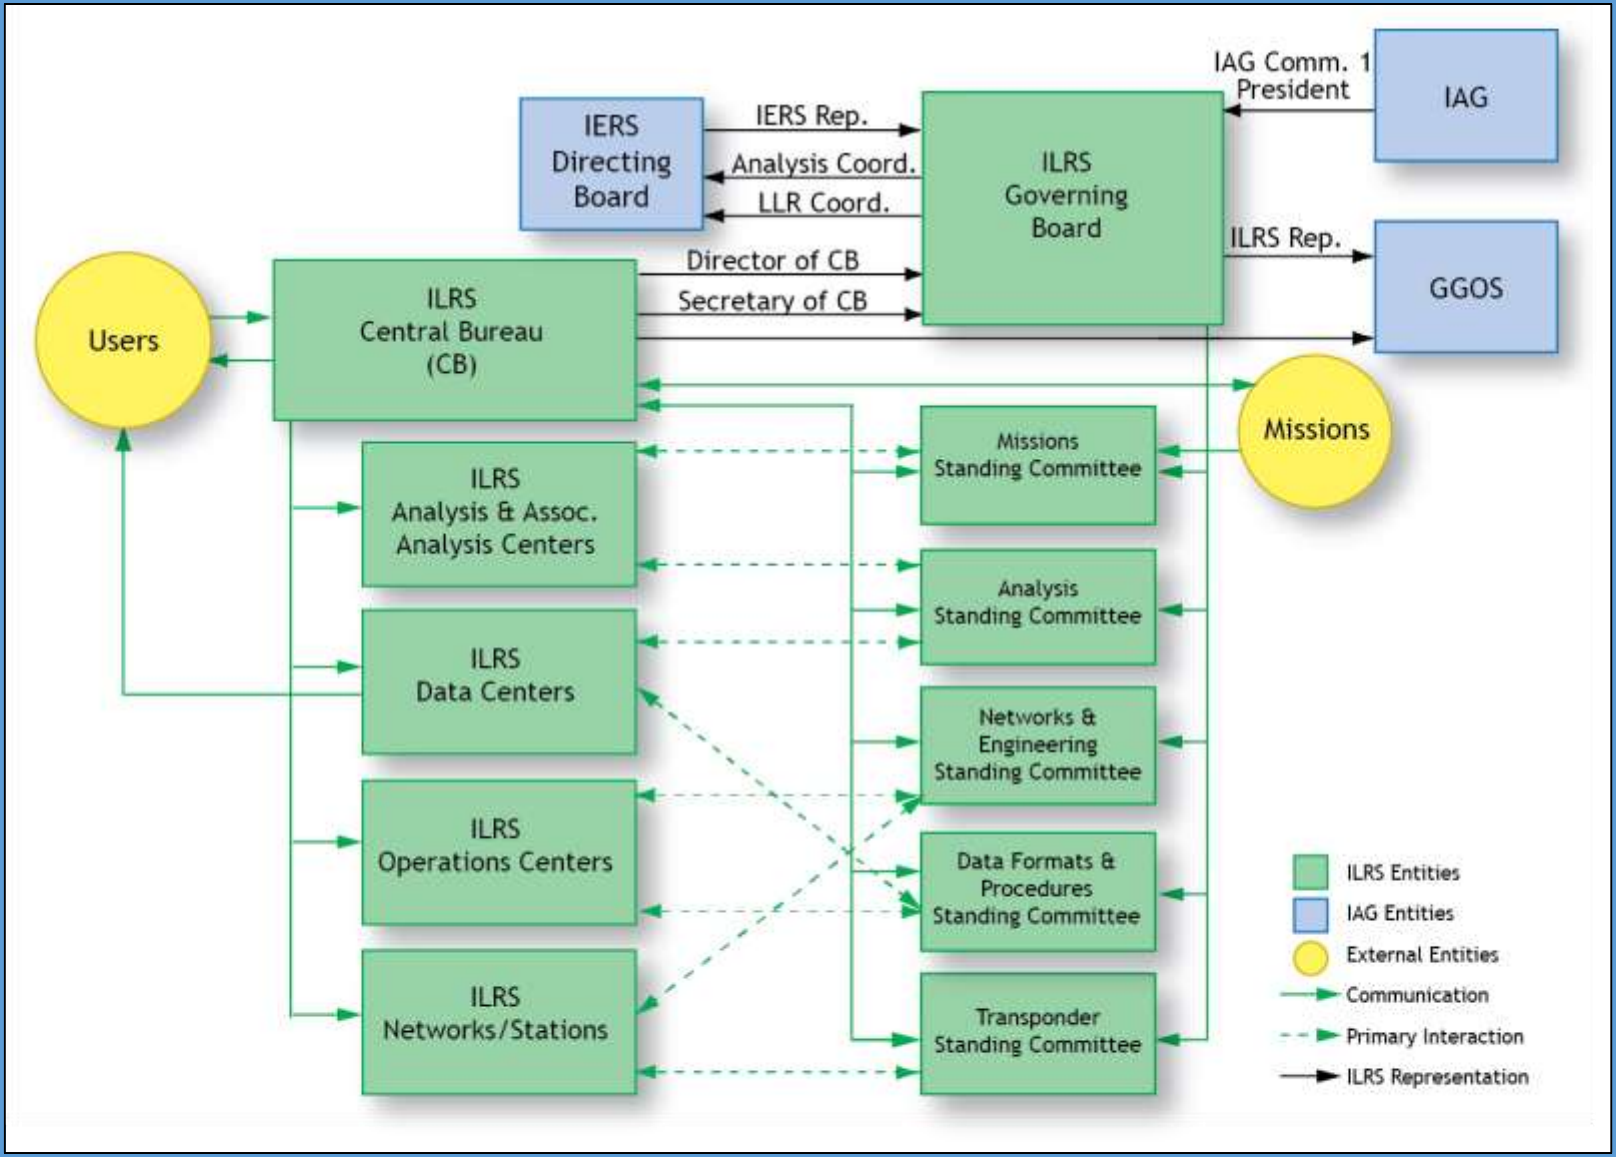


Orbital monitoring and re-entry forecast

The ILRS Mission

- Laser ranging activities are organized under the International Laser Ranging Service (ILRS) which
  - **provides global satellite and lunar laser ranging data and their derived data products to support research in geodesy, geophysics, Lunar science, and fundamental physics;**
  - **includes data products that are fundamental to the International Terrestrial Reference Frame (ITRF) - Earth Center Mass and Scale**
- The ILRS is one of the space geodetic services of the International Association of Geodesy (IAG) and is a member of the IAG's Global Geodetic Observing System (GGOS).
- The Services, **under the umbrella of GGOS, provide the geodetic infrastructure necessary for monitoring global change in the Earth system** *(Beutler and Rummel, 2012)*.

ILRS organization



International Workshops on Laser Ranging

- International Workshops on Laser Ranging typically held every two years
  - Program includes sessions on science, infrastructure, operations, technology, software, and mission design
  - Presentations, proceedings, summaries available on ILRS website
  - Clinics focus on small group interactions with station personnel
  - 21st International Workshop on Laser Ranging held in Canberra, Australia, November 2018
  - Theme: "Laser Ranging for Sustainable Millimeter Geoscience"

Number	Year	Location
1st	1973	Lagonissi, Greece
2nd	1975	Prague, Czechoslovakia
3rd	1978	Lagonissi, Greece
4th	1981	Austin, TX, USA
5th	1984	Herstmonceux, UK
6th	1986	Antibes, France
7th	1989	Matera, Italy
8th	1992	Annapolis, MD, USA
9th	1994	Canberra, Australia
10th	1996	Shanghai, China
11th	1998	Deggendorf, Germany
12th	2000	Matera, Italy
13th	2002	Washington, D.C., USA
14th	2004	San Fernando, Spain
15th	2006	Canberra, Australia
16th	2008	Poznan, Poland
17th	2011	Bad Koetzting, Germany
18th	2013	Fujiyoshida, Japan
19th	2014	Annapolis, MD, USA
20th	2016	Potsdam, Germany
21st	2018	Canberra, Australia
22nd	2020	Kunming, China

Over 150 participants in the 21st International Workshop on Laser Ranging, Canberra Australia https://cddis.nasa.gov/lw21/

ILRS Technical Workshops

- ILRS also organizes smaller, workshops in years between the International Workshops on Laser Ranging focused on current issues/topics or things we will need to address in the future.
  - Next technical workshop will be held in Stuttgart, Germany, October 21-25, 2019
  - Theme: "*Laser ranging: To improve economy, performance, and adoption for new applications*"
  - 2019 workshop will be proceeded by a one-day "SLR School" providing tutorials on SLR and the ILRS

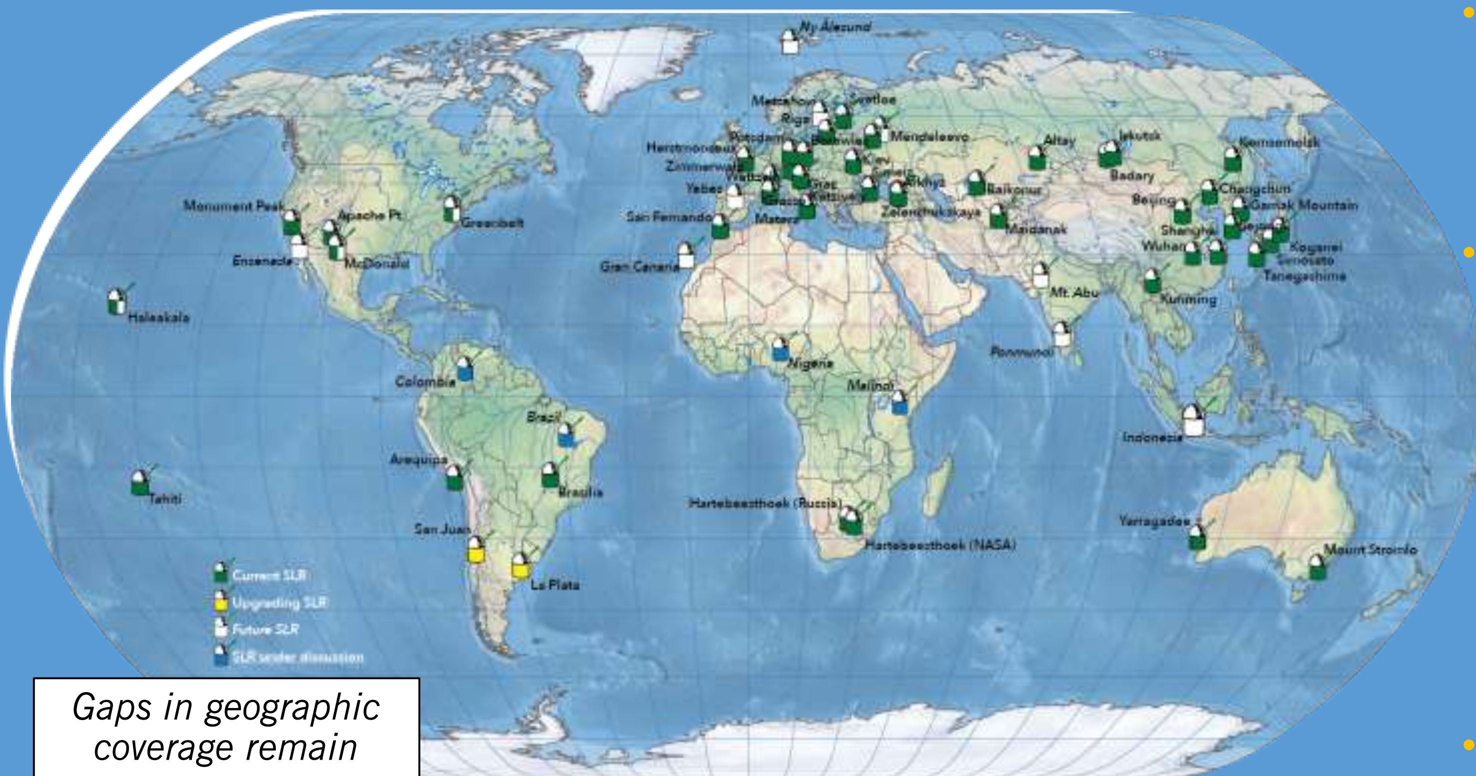
Topic	Year	Location
SLR System Calibration Issues	September 1999	Florence, Italy
Working Toward the Full Potential of the SLR Capability	October 2003	Kötzting, Germany
Observations Toward mm Accuracy	October 2005	Eastbourne, UK
Challenges for Laser Ranging in the 21st Century	September 2007	Grasse, France
SLR Tracking of GNSS Constellations	September 2009	Metsovo, Greece
Satellite, Lunar and Planetary Laser Ranging: Characterizing the Space Segment	November 2012	Frascati, Italy
Network Performance and Future Expectations for ILRS Support of GNSS, Time Transfer, and Space Debris Tracking	October 2015	Matera, Italy
Improving ILRS Performance to Meet Future GGOS Requirements	October 2017	Riga, Latvia
Laser ranging: To improve economy, performance, and adoption for new applications	October 2019	Stuttgart, Germany

Journal of Geodesy
Special Issue on Laser Ranging

30+ papers submitted;
18 papers published online;
4 papers in final review stage.

- The ILRS: Approaching twenty years and planning for the future
- Geodetic Satellites: A High Accuracy Positioning Tool
- Satellite Laser Ranging to Low Earth Orbiters - Orbit and Network Validation
- Version of a glass retroreflector satellite with a sub-millimeter "target error"
- Laser and Radio Tracking for Planetary Science Missions - A Comparison
- Assessment of the impact of one-way laser ranging on orbit determination of the Lunar Reconnaissance Orbiter
- Overview of Applications of Satellite Laser Ranging and Laser Time Transfer in BeiDou Navigation Satellite System
- Lunar Laser Ranging - A Tool for General Relativity, Lunar Geophysics and Earth Science
- NASA's Satellite Laser Ranging Systems for the 21st Century
- Time and laser ranging: A window of opportunity for geodesy, navigation and metrology
- The Next Generation of Satellite Laser Ranging Systems
- Rapid Response Quality Control Service for the Laser Ranging Tracking Network
- Solar orbital thermo-optical characterization of an innovative GNSS retroreflector array
- Operating two SLR Systems at the Geodetic Observatory Wettzell - from local survey to space ties
- Future SLR station networks in the framework of simulated multi-technique terrestrial reference frames
- Information Resources Supporting Scientific Research for the International Laser Ranging Service
- Modernizing and Expanding the NASA Space Geodesy Network to Meet Future Geodetic Requirements
- Time Bias Service: Analysis and Monitoring of Satellite Orbit Prediction Quality

ILRS network



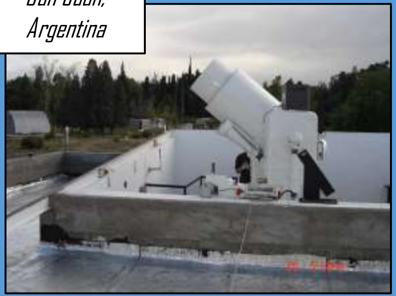
Gaps in geographic coverage remain

- BKG AGGO continuing setup at La Plata Observatory (Argentina)
- Russians implementing co-location concept in their own network to expand temporal coverage of satellites
- New stations underway:
  - Russia: Ensenada (Mexico), Java (Indonesia), Canary Islands (Spain)
  - NASA/NASA affiliated: McDonald, Halekala (USA), and Ny Ålesund (NMA, Norway)
  - Others: Metsahovi (Finland), Mt. Abu and Ponmundi (India), and Yebes (Spain)
- Upgrades underway at some stations

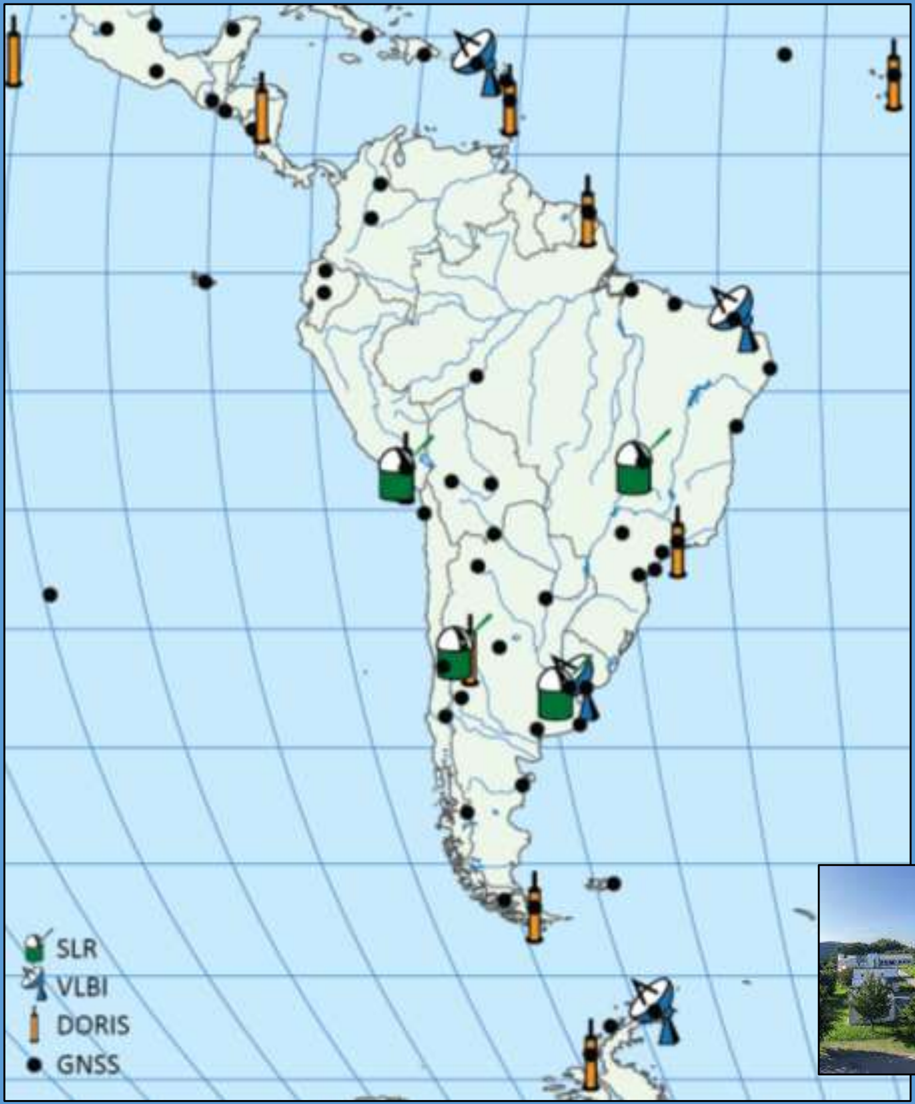
Space geodesy in South America

Arequipa, Peru

San Juan, Argentina



O'Higgins, Antarctica



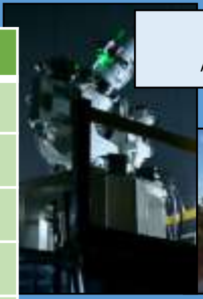
Sazhen-TM, Brasilia, Brazil

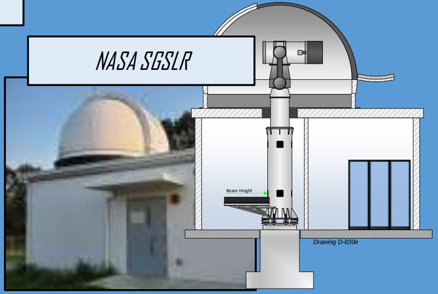
Fortaleza, Brazil

AGGO, Argentina

Future developments: network

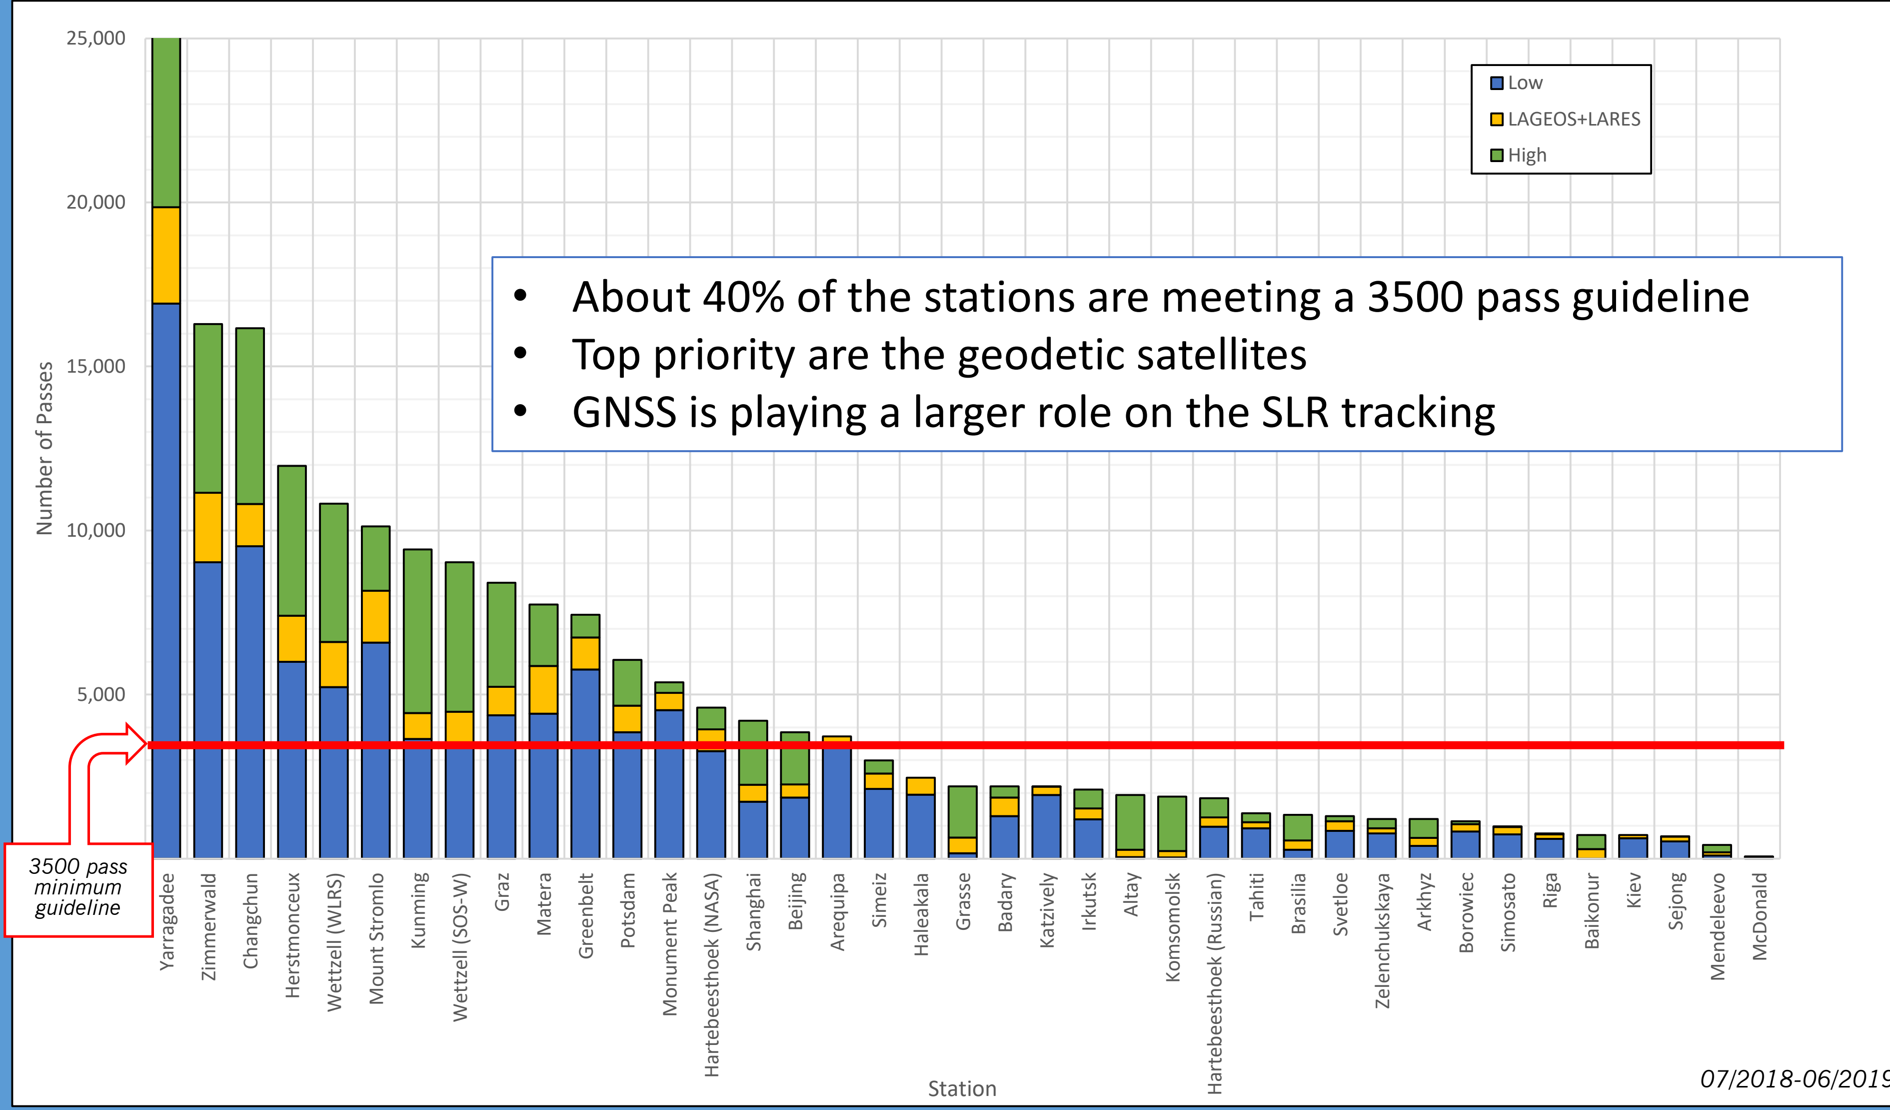
Site	Type	Agency	Timeframe
La Plata, Argentina	Upgraded core site	BKG, Germany	2019 – 2020
San Juan, Argentina	Upgraded SLR system	NAOC, China	2019 – 2020
Metsahovi, Finland	New SLR system	FGRI, Finland	2019 – 2020
Greenbelt, MD, USA	Replacement core site	NASA, USA	2019 – 2020
Haleakala, HI, USA	Replacement core site	NASA, USA	2019 – 2020
McDonald, TX, USA	Replacement core site	NASA, USA	2019 – 2020
Ny Ålesund, Norway	New core site	NMA, Norway/NASA, USA	2019 – 2020
Ensenada, Mexico	New SLR site	IPIE, Russian Federation	2022 – 2026
Java, Indonesia	New SLR site	IPIE, Russian Federation	2022 – 2026
Gran Canaria, Spain	New SLR in core site	IPIE, Russian Federation	2022 – 2026
Tahiti, French Polynesia	New SLR system	IPIE, Russian Federation	2022 – 2026
Mt Abu, India	New SLR site	ISRO, India	2019 – 2020
Ponmundi, India	New SLR site	ISRO, India	2019 – 2020
Tsukuba, Japan	New SLR site	JAXA, Japan	2021
Yebes, Spain	New SLR site	IGS, Spain	2022





Many new and upgraded SLR Stations coming on line in the next few years

Station performance: passes



- About 40% of the stations are meeting a 3500 pass guideline
- Top priority are the geodetic satellites
- GNSS is playing a larger role on the SLR tracking

Analysis activities (ASC)

- Working on the development of the ITRF2020 series; production starts in late 2019
- Currently we are testing new models for gravity, tides, TVG, and target signature (CoM) models, and the inclusion of LARES data
- New operational approach to handling error sources in our current modeling standards
  - Allowance for estimation of systematic errors simultaneously with all other parameters to eliminate biases in station positions (mainly height)
  - Improved corrections in the current model for the Center of Mass (CoM) target signatures; such errors can affect the SLR-VLBI scale difference at the 0.25 ppb level
- Next steps
  - Low degree/low order gravity field terms (data product)
  - Include LARES satellite to the operational data products and ITRF2020
  - Add atmospheric loading to the operational data products (at the observation level)

Issues & challenges

- Many geographic gaps, primarily in Latin America, Africa, and Oceania
- Mix of new and old technologies, levels of financial support, weather
- Lack of standardization in system hardware and operations
- Data quality issues (efforts underway to detect and reduce systematics)
- Number of target satellites continues to increase as new missions use SLR for orbit determination and other applications (110+ satellites)
