

Map showing the SIRGAS Reference Network stations across Latin America and the Caribbean. The network consists of numerous ground-based stations, each identified by a unique station code. The stations are distributed across the region, with a high density in the northern and central parts of South America, particularly in Colombia, Venezuela, and the northern coast of South America. Other stations are located in Central America, the Caribbean, and southern South America, including Chile and Argentina. The map includes a coordinate grid with longitude lines at 120°, 90°, 60°, and 30° West, and latitude lines at 30° North, 0° (Equator), 30° South, and 60° South.
